

# blueHead Air

Spray application heads for thermoplastics

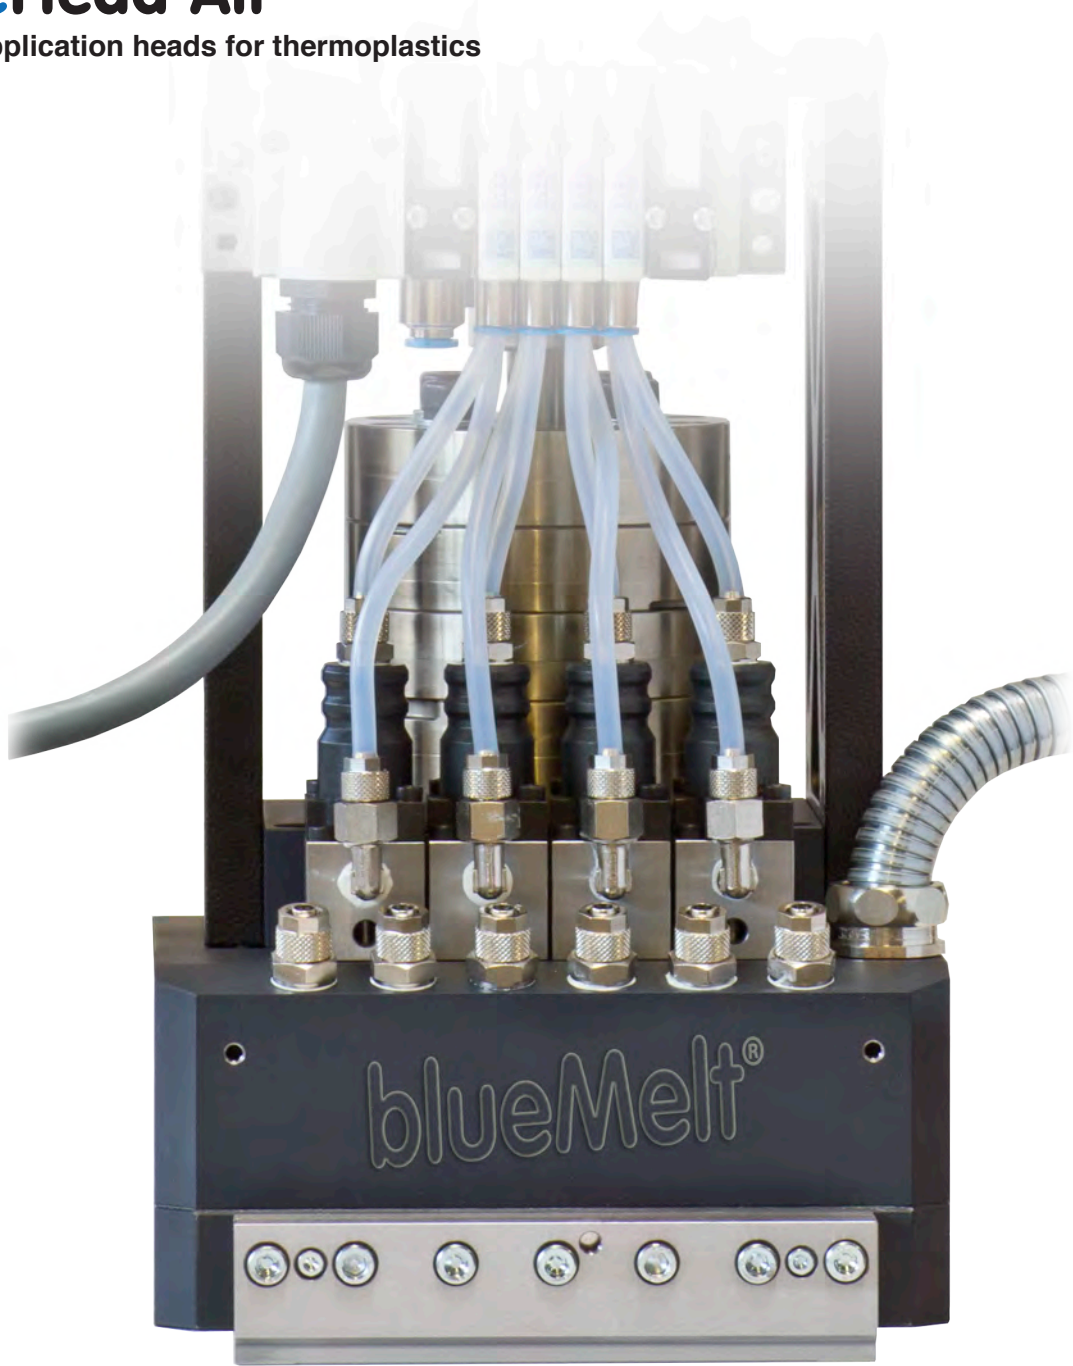

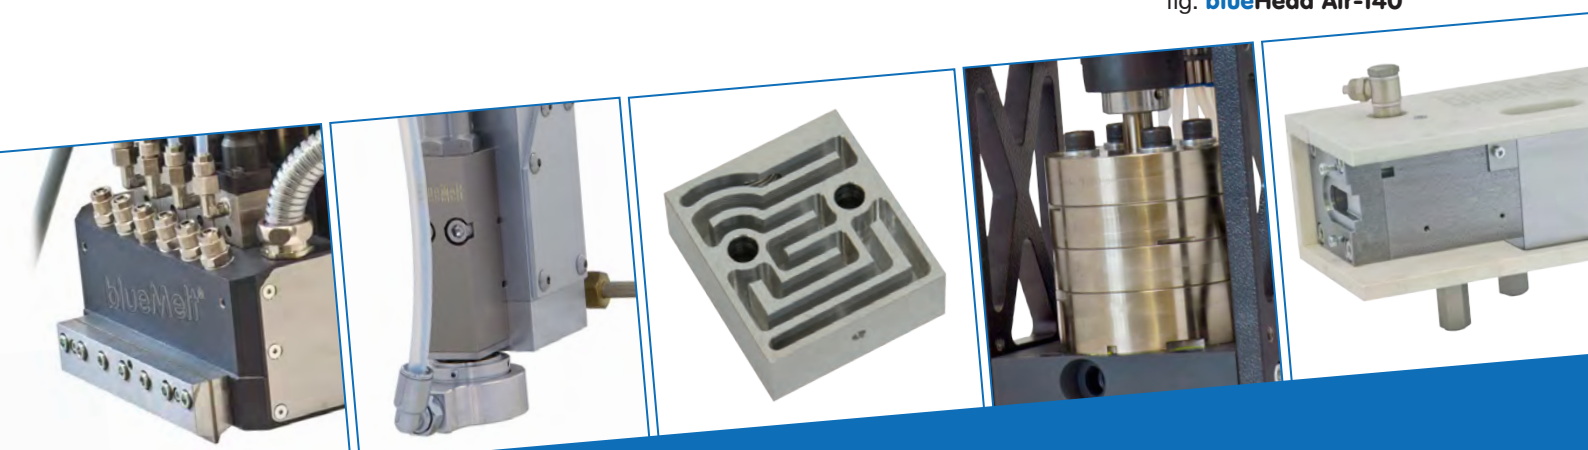

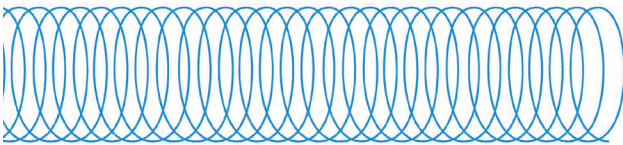

fig. blueHead Air-140

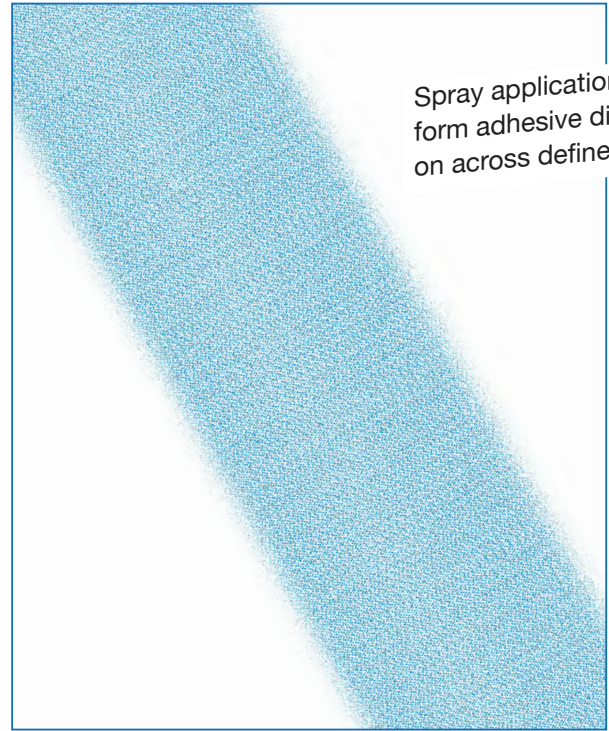

Application head for spin spray application with air heater

blueHead Air application heads produce application-specific adhesion patterns of a consistent high quality. The flexibility of this application technology allows for thin continuous adhesive layers without any wastage to keep costs down. The application heads of the blueHead Air series come in various versions and can be easily configured to cater for a wide range of materials such as paper, metal and plastic foils, foam products, textiles, fabrics, carpets, felts, other non-wovens and many more flexible substrates.

Spray application for uniform adhesive distribution across defined area

Continuous supply of process quality adhesive by means of blueDrum 20
